

not only a **recording** method which enables stable continuous **recording** without being affected by the existence of many defective areas on an information storage medium but also an information **recording** and reproducing device which uses the **recording** method. There is further provided an information storage medium (as well as the data structure of the information recorded on the medium) on which information has been recorded in the most suitable form for the stable continuous **recording**.

Detailed Description Text - DETX (905):

Furthermore, there is provided an environment setting method (specifically, a video information **recording**/reproducing/editing system) which assures stable video information management without imposing a burden on the **recording**/reproducing application software layer (or without causing the **recording**/reproducing application software layer to perform defect management), even when many defective areas are present on the information storage medium.

Detailed Description Text - DETX (907):

The present invention is applicable to an information storage medium, such as an optical disk, its data structure, an information **recording** method, an information **recording** device, and a playback device.

Detailed Description Paragraph Equation - DEEQ (1):

(the amount of light in **recording**)>(the amount of light in deleting)>(the amount of light in reproducing) (1)

Detailed Description Paragraph Equation - DEEQ (2):

(the amount of light in **recording**).apprxeq.(the amount of light in deleting)>(the amount of light in reproducing) (2)

Detailed Description Paragraph Table - DETL (1):

TABLE 1 LIST OF FUNCTIONS (EFFECTS OF EMBODIMENTS OF THE PRESENT INVENTION) NECESSARY IN **RECORDING** AND REPRODUCING VIDEO INFORMATION (LIST OF EFFECTS PRODUCED BY VIDEO INFORMATION **RECORDING** AND
